SELECT ANY OF THE 3 RECORDING MODES

It is a great experience to watch what your dog can see in its point of view. Then, the Eyenimal Dog Videocam is the best video camera to use because of its unique feature of 3 selections in what recording mode you will use. You can choose Continuously Record, Record Only when moving and Record when stationary (not moving). This is good to use for the hunting dogs, or even just for nature adventures.

AUDIO RECORDING STANDBY OPTION

To complete the experience in how your dog can see, hear and react to its environment, an audio recording functionality is also available to use while recording the video. Because of the microphone being exposed, it is important that the Eyenimal Dog Videocam is in a water free environment.

MOVEMENT RECOGNITION FEATURE

Setting the mode selector to Position #2, this will activate the movement detection feature in which the video camera automatically stops recording if your dog stops moving or if it's on standby. A good feature that saves the battery life in the Eyenimal Dog Videocam.

4GB INTERNAL MEMORY AND MICRO SD EXPANDABLE MEMORY

Now you will not miss any moments with your pet because Eyenimal Dog Videocam has an internal memory of 4GB and a Micro-SD slot that you can expand the memory of the camera for longer video recordings.

RECHARGEABLE BATTERY LASTS FOR 2 HOURS

The Eyenimal Dog Videocam has a rechargeable battery that you can use for 2 hours and may extend up to 3 hours depending on the recording mode you selected for the video.

VIDEO CAMERA THAT YOU CAN ALSO USE

We like you to also enjoy recording of how you see the world in your perspective. When you have bonding moments with your pets or even with your family and friends, the Dog Videocam would capture the best moments for those special events. So a CAP is included where you can put the camera as a gift from Eyenimal to you.

A YEAR WARRANTY WITH EYENIMAL

EYENIMAL delivers one of the best quality Dog Videocam that is why this product has one year warranty for factory defects.
