3 MANUAL MODES – 8 STIMULATION LEVELS AUTO MODE – PAVLOVIAN TONE – TEST MODE

The Barkless Pro BP-504 e-Collar features 3 modes that you can select manually. The automatic mode has 8 stimulation levels that will increase every 2 activations till it reached to level 8. The Pavlovian tone and test mode can also be an effective way to train the dog not to bark too much.

LITHIUM-POLYMER BATTERY FOR 2 HOURS FAST CHARGE

You can charge the BP-504 Bark Collar for only 2 hours that can be used for another whole day of using it. And when charging, you allow to rest your dog's neck to avoid rashes or skin irritations from prolong friction of the probe to your dog's skin.

FULLY SUBMERSIBLE AND SHOCK PROOF

Even your dog loves water or is very playful, the Barkless Pro electronic collar is completely safe from water and shock damages. The housing is designed to be very durable.

SOUND ACTIVATION BEFORE STIMULATION

The audible sound activates before stimulation is given on this Barkless BP-504 e-Collar for your dog. In just short period of time, your dog won't need stimulations because your dog will learn to associate the sound with his bark.

5 SECONDS DELAY BETWEEN ACTIVATING STIMULATION

Another great feature on this bark collar from Educator is the stimulation will only activated and increases every 5 seconds that your dog starts to bark. This is to avoid giving false correction on your dog and still allows your dog to bark but not too much.

VIBRATION DETECTION – YOUR DOG'S BARK ONLY

A vibration coming from your dog's vocal cords activates the bark control collar. Proper placement is required for a more accurate detection.

SENSOR SENSITIVITY ADJUSTER

The Educator Barkless BP-504 E-Collar has a sensor sensitivity adjuster that will allow you adjust the sensitivity of the unit to activate during your dog's barking. This will allow you make guarantee and properly activating the bark collar on how your dog needs to be corrected and learn quickly.
