BARK INDICATION COUNTER

This allows you to check and identify how your dog behaves especially when you're not at home. The number of barks will assist you if your dog needs a new (higher) recognition level for the correction – by knowing and doing so, you wouldn't have to deal with your neighbour's noise complaints again.

5 PROGRAMMABLE LEVELS OF HARMLESS STATIC PULSES

The DogWatch Bark Collar Mini gives you an option to set the level of static stimulation that effectively deters your dog from nuisance barking. You can start at Level 0 which is the vibration-only mode. Then level 1 as low, level 2 as medium low, level 3 as medium, level 4 as medium high and level 5 as high.

AUTOMATIC & PROGRESSIVE CORRECTION

This bark collar trains your dog to bark at acceptable levels in the most effective way – the progressive correction will occur if your dog goes on a barking episode, the static stimulation level will go higher & higher than the level you have set the collar to as your dog continues to bark.

AUTO-RESET FUNCTION

This anti-bark collar feature protects your dog from getting stimulated at the wrong level - since the DogWatch Bark Collar Mini has a progressive correction system. So, the collar will not zap your dog at the higher level where it left off while it was progressing. Instead, it will reset back to the level you've set the bark collar to, within 3 minutes of barking inactivity.

THE BARK "FORGIVENESS" DELAY

DogWatch Bark Collar Mini is designed with this feature to make sure that your dogs are properly trained to bark at acceptable levels – the collar will not immediately emit the static correction as soon as your dog barks, it will allow your dog to bark for at least 3 seconds before the stimulation is delivered. This helps your dog to better associate the nuisance barking habit to the correction.

AUTOMATED SAFETY SHUTDOWN & RESET

The DogWatch Bark Collar Mini is equipped with this technology for danger situations wherein your dog has to bark and could be excessively – the collar will stop delivering any corrections if it has been activated for 10 times in 15 minutes. Then, it will restart after another 15 minutes.
