BARK COUNT METER – SHOWS NUMBER OF BARKS

Check whether your selected setting is effective by determining the number of barks with the Bark Indication Counter when you get home and change the level accordingly.

15 TOTAL STIMULATION LEVELS – 5 SETTINGS WITH 3 AUTOMATIC LEVELS EACH

The DogWatch BT-7 features 5 settings with 3 automatically increasing levels within each setting giving you a total of 15 levels to train your dog's nuisance barking.

AUTOMATIC PROGRESSIVE SETTING OR USE ONE OF THE 5 SETTINGS

You have the option of fully progressive stimulation or one of the 5 settings available. This allows you to find the perfect level or setting to eliminate your dog's nuisance barking.

VIBRATION ONLY OR STATIC STIMULATION

You can use either Static Stimulation or Vibration Stimulation to train your dog. Vibration is recommended when training the dog how the bark collar works or when your dog has been trained with Static Stimulation but needs a soft reminder every now and then with a short vibration.

LONGER STIMULATIONS ON LOW LEVELS – EFFECTIVE TRAINING

Stimulations last for 2 seconds per activation on lower levels and about half a second on higher levels for better and effective training. This can be compared to a long growl from a mother and a short strong bark to train your dog.

RECHARGEABLE LI-ION BATTERY – UP TO 3 MONTHS ON A SINGLE CHARGE

The DogWatch Bark Collar comes equipped with a Rechargeable Li-Ion battery that can last up to 3 months on a single charge.

1 YEAR MANUFACTURER WARRANTY

The Bark Collar unit is covered by 1 year manufacturer's warranty.
